In conversation with

As the economy recovers, power demand has spiked. And with thermal power plants running out of coal, several states have faced load-shedding.

Despite the accelerating push for renewable energy sources, coal remains the predominant source of power in India. But the sector is dogged by problems — including large dues from power companies and stagnating output.

What are the structural issues in the coal sector that contributed to the recent problems in supply?

How can the country optimally utilise its large coal resources as global pressure mounts to curb its use?

With climate change now the world's predominant concern, what is the future of coal in India?
